## NOTES

From August 1994, the industrial classification used in the Labour Force Survey is the Australian and New Zealand Standard Industrial Classification (ANZSIC) which has replaced the Australian Standard Industrial Classification (ASIC) (see p. 31) and the classification Status in Employment replaced Status of Worker, (see p. 32).

There have been several changes made to regional data published. For information regarding the availability of regional data contact the Inquiry Service on (07) 3222 6351.

## INQUIRIES

- for further information about statistics in this publication and the availability of related unpublished statistics, contact the Inquiry Service on Brisbane (07) 3222 6351 (fax (07) 3229 6042) or any ABS State office.
- for information about other ABS statistics and services, telephone, fax or write to the Inquiry Service, Australian Bureau of Statistics (ABS), GPO Box 9817, Brisbane Q 4001.

## SUMMARY OF FINDINGS

## SEASONALLY ADJUSTED SERIES

In seasonally adjusted terms, employment in Queensland increased by 67,000 to 1,509,100 between August 1994 and August 1995 while the number of unemployed persons increased by 7,000 to 151,400 over the same period. At August 1994 and August 1995, the unemployment rate remained at 9.1% while the participation rate increased from 63.9% to 65.0%.

For Australia, in seasonally adjusted terms, employment increased by 333,200 and the number of unemployed persons decreased by 78,500 from August 1994 to August 1995. Over the same period, the participation rate increased by 1.0 percentage point to 63.8% and the unemployment rate fell from 9.5% to 8.3%.

TABLE 1 — LABOUR FORCE, QUEENSLAND  
(Seasonally adjusted series)

Particulars	Unit	August 1994	May 1995	June 1995	July 1995	August 1995	Annual percentage change

Participation rate	%	63.9	65.3	65.4	65.2	65.0	..

## TREND SERIES

In Queensland, employment increased in trend terms by 72,000 to 1,515,400 between August 1994 and August 1995 while the number of unemployed persons increased to 148,300 over the same period. The unemployment rate fell from 9.1% in August 1994 to 8.9% in August 1995. The participation rate increased from 64.0% in August 1994 to 65.4% in May 1995, then fell to 65.1% in August 1995. In Australia, employment increased by 323,200 from August 1994 to August 1995 while the number of unemployed persons decreased by 88,300 over the same period.

DIAGRAM 1 - EMPLOYED PERSONS: MONTHLY PERCENTAGE CHANGE  
(Trend series)

DIAGRAM 2 - UNEMPLOYMENT RATE  
(Trend series)

## ORIGINAL SERIES

In original terms, the number of employed persons in Queensland in August 1995 was 1,500,300 and the number of unemployed persons was 141,900. The median duration of unemployment declined from 26 weeks in August 1994 to 22 weeks in August 1995.

## Regional estimates

The unemployment rate for the Brisbane Major Statistical Region (MSR) in August 1995 was 8.1% and for the Balance of Queensland was 9.1%. South and East Brisbane Statistical Division (BSD) had the highest unemployment rate in the Brisbane MSR while the Brisbane City Outer Ring had the lowest rate.

For the Balance of Queensland, regions with the highest unemployment rates were Wide Bay-Burnett and North and West Moreton. The Far North Statistical Region had the lowest unemployment rate.

SUMMARY OF FINDINGS — *continued*

For the Balance of Queensland, regions with the highest unemployment rates were Wide Bay-Burnett and North and West Moreton. The Far North Statistical Region had the lowest unemployment rate.

DIAGRAM 3 - UNEMPLOYMENT RATE: REGIONS OF QUEENSLAND,  
AUGUST 1994 AND AUGUST 1995

### Youth estimates

The number of 15 to 19 year olds in the Queensland labour force increased by 11,700 to 148,300 persons over the year from August 1994 to August 1995, while the number employed increased by 3,800 to 117,700 persons. The unemployment rate for this group increased from 16.6% in August 1994 to 20.6% in August 1995 and the participation rate rose from 56.8% in August 1994 to 61.3% in August 1995.

There were 196,300 employed 20 to 24 year olds in August 1995, an increase of 6,700 (3.5%) over the previous 12 months. The participation rate of this age group increased from 81.8% in August 1994 to 82.4% in August 1995 while the unemployment rate declined from 12.3% to 11.4% over the same period.

## SPECIAL SURVEYS DATA RELATING TO THE LABOUR FORCE

Although emphasis in the population survey is placed on the regular collection of data on demographic and labour force characteristics, supplementary and special surveys of particular aspects of the labour force are carried out from time to time. The results of these surveys on labour force and related topics are published separately as shown below.

<i>Title of publication</i>	<i>Latest Data</i>	<i>Catalogue No.</i>
<i>Annual and Long Service Leave Taken, Australia</i>	May 1988 to April 1989	6317.0
<i>Career Experience, Australia</i>	February 1993	6254.0
<i>Career Paths of Persons with Trade Qualifications, Australia</i>	1993	6243.0
<i>Career Paths of Qualified Nurses, Australia</i>	March to July 1989	6277.0
<i>Child Care, Australia</i>	June 1993	4402.0
<i>Employment Benefits, Australia</i>	August 1994	6334.0.40.001
<i>Survey of Income and Housing Costs and Amenities</i>	1989 - 90	6546.0
<i>Job Search Experience of Unemployed Persons, Australia</i>	July 1994	6222.0
<i>Labour Force Experience, Australia</i>	February 1995	6206.0.40.001
<i>Labour Force Status and Educational Attainment, Australia</i>	February 1994	6235.0
<i>Labour Force Status and Other Characteristics of Families, Australia</i>	June 1995	6224.0.40.001
<i>Labour Force Status and Other Characteristics of Migrants, Australia</i>	September 1993	6250.0
<i>Labour Mobility, Australia</i>	February 1994	6209.0
<i>Multiple Jobholding, Australia</i>	August 1994	6216.0.40.001
<i>Participation in Education, Australia</i> (Formerly <i>Labour Force Status and Educational Attendance, Australia</i> )	September 1994	6272.0.40.001
<i>Persons Employed at Home, Australia</i>	March 1992	6275.0
<i>Persons Not in the Labour Force, Australia</i>	September 1994	6220.0.40.001
<i>Persons Who Had Re-entered the Labour Force, Australia</i>	May 1993	6264.0
<i>Persons Who Have Left the Labour Force, Australia</i>	September 1994	6267.0.40.001
<i>Retirement and Retirement Intentions, Australia</i>	November 1994	6238.0.40.001
<i>Successful and Unsuccessful Job Search Experience, Australia</i>	July 1994	6245.0
<i>Superannuation, Australia</i>	November 1993	6319.0
<i>Trade Union Members, Australia</i>	August 1994	6325.0.40.001
<i>Training and Education Experience, Australia</i> (Formerly <i>How Workers Get Their Training, Australia</i> )	1993	6278.0
<i>Transition From Education to Work, Australia</i>	May 1994	6227.0
<i>Underemployed Workers, Australia</i>	September 1994	6265.0.40.001
<i>Weekly Earnings of Employees (Distribution), Australia</i>	August 1994	6310.0.40.001
<i>Working Arrangements, Australia</i>	August 1993	6342.0

Special tabulations of data from these surveys are available. Please contact the Inquiry Service on (07) 3222 6351 for further information.

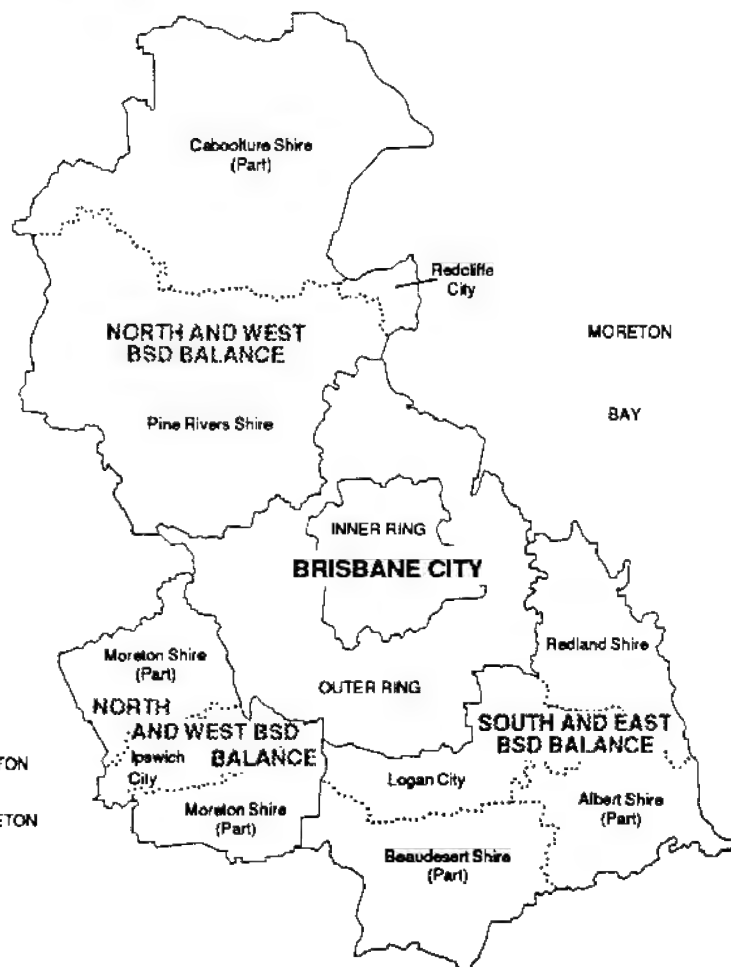

## CUSTOMISED REPORTS

Summary reports at the national, State and regional level can be prepared for any aspect of the labour force required or on any aspect of employment, earnings or industrial conditions. Please contact the Inquiry Service on (07) 3222 6351 for details or write to the Australian Bureau of Statistics, GPO Box 9817, Brisbane Q 4001.

## *RECENT RELEASES OF INTEREST*

***Labour Search Experience, Australia, February 1995*** (6206.0.40.001), (\$17.50)

This publication contains information on the labour force experience of persons aged 15 to 69 during the year ended February 1995. Details include the time in the labour force, the number of spells looking for work, the number weeks spent working, looking for work or not in the labour force during the year and main activity while not in the labour force. Estimates are classified by sex, age, marital status, industry and occupation.

***Labour Force Status and Other Characteristics of Families, Australia, June 1995*** (6224.0.40.001), (\$17.50)

This publication contains 40 tables displaying information about family members, couple families, one parent families and other families. The tables provide data about the labour force and other characteristics of families, including estimates by number and age of dependants, birthplace, age of parents, State and Territory data and estimates of family size.

Please contact the Inquiry Service on (07) 3222 6351 for further information.

## *LABOUR FORCE SUPPLEMENTARY SURVEY PROGRAM - 1995*

<b>Topic</b>	<b>Survey Month</b>
Labour Force Experience	February
Transition from Education to Work	May
Job Search Experience of Unemployed Persons	July
Persons Who Had Re-entered the Labour Force	July
Weekly Earnings of Employees (Distribution)	August
Working Arrangements	August
Absences from Work	August
Persons Not in the Labour Force	September
Underemployed Workers	September
Persons Employed at Home	September
Participation in Education	September
Superannuation	November

An Aboriginal and Torres Strait Islander identifier was added to the March 1994 and February 1995 Labour Force Surveys.

## EARLY RELEASE OF MONTHLY REGIONAL LABOUR FORCE DATA

Labour Force data for Queensland regions is available each month as an annual subscription service.

By subscribing to this service you will receive regional labour force data soon after the release of *The Labour Force, Australia, Preliminary* (6202.0).

Information will be provided on the number of persons employed, unemployed, persons in the labour force, persons not in the labour force, the unemployment rate, the participation rate and youth unemployment for the 11 statistical regions in Queensland.

If you are interested in subscribing to this service please complete the order form below and mail to:

***Client Support Section, ABS, GPO Box 9817,  
Brisbane Q 4001  
(Telephone: 07 3222 6235)***

I wish to receive by mail ☐ or fax ☐ Regional Labour Force data each month at an annual subscription of **\$240** or **\$25** for a single month.

## What is PC AUSSTATS ?

- a 24-hour on line access system to the latest Australian Bureau of Statistics (ABS) data
- enables you to manipulate ABS data for your own purposes
- an access to ABS time series data
- In general the data available on PC AUSSTATS can be used to look for trends in economic and demographic conditions at national and state levels

## EXPLANATORY NOTES

### The population survey

The survey is based on a multi-stage area sample of private dwellings and non-private dwellings (hotels, motels, etc.) and usually covers approximately three-fifths of 1 per cent of the population of Queensland. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during a period of 2 weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

### Scope

2. The labour force survey includes all persons aged 15 years and over except:

- (a) members of the permanent defence forces;
- (b) certain diplomatic personnel of overseas governments, customarily excluded from Census and estimated populations;
- (c) overseas residents in Australia and
- (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

### Coverage

3. In the labour force survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling and hence has only one chance of selection. The coverage rules are, necessarily, a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the one survey is considered to be negligible.

4. Persons who are away from their usual residence for 6 weeks or less at the time of interview are enumerated at their usual residence when relevant information can be obtained from other usual residents present at the time of the survey.

### Supplementary and special surveys

5. Emphasis in the population survey is placed on the regular collection of specific data on demographic and labour force characteristics of the population. However, supplementary and special surveys of particular aspects of the labour force or of other subjects are carried out from time to time. Statistics from these surveys are published and are available on request. A list of survey publications on labour force and related topics is shown on page 20.

### Population benchmarks

6. Labour force survey estimates of persons employed, unemployed and not in the labour force are calculated in such a way as to add up to the independently estimated

distribution of the population aged 15 years and over by age and sex. This procedure compensates for under-enumeration in the survey and leads to more reliable estimates. The independent population statistics (benchmarks) are the latest available estimates at the time the labour force survey is conducted, but they usually differ from the official population estimates subsequently published in the quarterly ABS publication *Australian Demographic Statistics* (3101.0) because they are necessarily derived from incomplete information about population changes.

7. Since regular estimates of the population are not available at the regional level, the State benchmarks were used to produce regional estimates. This methodology assumes a common pattern of under-enumeration at the regional level and also ensures that regional estimates add to the State totals.

8. While this procedure can be expected to provide reliable estimates of unemployment and participation rates, it cannot be taken as completely reliable for estimates of numbers involved. For this reason estimates of numbers in each region have not been added to provide an estimate of the total civilian population aged 15 years and over.

### Revision of series

9. Survey estimates are not revised for the usually small amendments of population benchmarks arising from new data on deaths and overseas and internal migration. Revisions are made, however, after each census of population and housing and when population estimation bases are reviewed. These revisions affect unadjusted, seasonally adjusted and trend estimates. The last such revision was made in February 1994 to take account of the results of the 1991 Census of Population and Housing. This affected all the monthly estimates from January 1989 to January 1994.

10. The estimates shown in this publication are based entirely on place of usual residence. Prior to October 1982, the estimates were based on a combination of place of enumeration and place of usual residence.

11. Until February 1978, surveys were conducted in February, May, August and November each year from 1964. From February 1978 the survey has been conducted on a monthly basis.

12. The questionnaire used in the survey for the collection of labour force data has been revised a number of times. Details of these changes have been published in *Information Paper: Questionnaires Used in the Labour Force Survey* (6232.0) in March 1978, December 1981, August 1984, June 1986, June 1991 and March 1993.

### Comparability of series

13. As noted in paragraph 9, estimates from January 1989 have been revised to conform to revised population

## EXPLANATORY NOTES — continued

estimates following the 1991 Census of Population and Housing and are thus not strictly comparable with estimates for periods prior to January 1989 which have not been revised.

14. Regional estimates are based on statistical regions from September 1987. They are not comparable with estimates prior to that date which were based on differently composed dissemination regions.

15. Comparability with estimates produced from the quarterly survey of employment and earnings is affected by the use of a different survey methodology and definitions. The labour force survey provides estimates of people in jobs whereas the survey of employment and earnings provides an estimate of the number of jobs held by employees. A more detailed description of the differences between these two series is provided in *Information Paper: Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings* (6263.0).

#### Reliability of estimates

16. Estimates in this publication are subject to two sources of error.

(a) *Sampling error.* Since the estimates are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, may differ from the figures that would have been produced if all dwellings had been included in the survey. More information on this topic is given in the Technical Notes.

(b) *Non-sampling error.* Inaccuracies may occur because of imperfections in reporting by respondents and interviewers and errors made in coding and processing data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

#### Reliability of regional labour force estimates

17. While the Labour Force Survey is designed primarily to produce reliable estimates at the national and State or Territory level, it also delivers estimates for a number of regions within States.

As with the national and State estimates, regional labour force estimates are subject to sampling error. Since estimates for regions are components of corresponding State level and thus are based on a considerably smaller sample size, they are subject to higher relative standard errors. Care should therefore be taken in the interpretation of regional estimates, particularly when comparing month-to-month movements. Tables of standard errors for each region are available from the ABS.

#### Survey sample redesign

18. The labour force survey sample was redesigned and reselected using information collected in the 1991 Census of Population and Housing. The new sample was phased in over the period September to December 1992. For details, see *Information Paper: Labour Force Survey — Sample Design* (6269.0).

19. For the most part, one quarter of the new sample was introduced each month so that, by December 1992, the entire new sample was in place. Replacement occurred generally at the rotation group level with two groups substituted each month. Such a pattern of implementation means that any changes to labour force estimates due to differences between the two samples, or any other influences, was spread over 4 months rather than being concentrated in one inter-month period.

20. This phase-in scheme applied to the private dwelling sample in urban areas. The new sample for non-private dwellings and private dwellings in rural areas was introduced in a single stage in November 1992.

21. The sampling fraction differs for States and Territories to enable estimates of reasonable accuracy to be produced at State level as well as for Australia. The sampling fraction for Queensland is 1 in 195.

#### Potential effects on labour force survey estimates

22. Implications for estimates produced from the Labour Force Survey due to sample redesign and its implementation are as follows:

(a) The sampling error in Queensland increased overall initially by about 8% over the previous level but will decline gradually during the life of the new sample. There were also higher standard errors for the estimates of month-to-month movements produced during the period September 1992 to December 1992 compared with those for the corresponding series produced prior to this period and from January 1993 onwards. *Overall, these are estimated to be up to 20% higher than the normal standard errors for monthly movements.*

(b) Analysis has shown that the unemployment rate was marginally higher (less than 0.5 percentage points) for those persons in sample for the first time. Normally, this will not affect the overall estimates of month-to-month movements because the number of persons in sample does not change significantly. However, during the transition period, there were twice as many as usual in sample for the first time. This may have caused a small upward movement (of less than 0.1 percentage points) in the unemployment rate from August 1992 to September 1992 and a compensating decrease from December 1992 to January 1993.

## EXPLANATORY NOTES — continued

**Changes to regions**

23. The following changes to the existing Queensland labour force dissemination regions took effect from September 1992:

The Brisbane Major Statistical Region has been expanded to include all of the Shire of Pine Rivers and additional parts of the Shires of Caboolture, Beaudesert, Moreton and Albert. 'South and East Brisbane Statistical Division (BSD) Balance Statistical Region' and 'North and West BSD Balance Statistical Region' have been enlarged with corresponding reductions to 'South and East Moreton Statistical Region' and 'North and West Moreton Statistical Region'.

**Seasonal adjustment**

24. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effect of other influences on the series can be more clearly recognised. Seasonal adjustment does not remove the irregular or non-seasonal influences which may be present in any particular month. Influences that are volatile can still make it difficult to interpret the movement of the series even after adjustment for seasonal variation. Seasonal factors are reviewed annually to take account of each additional year of original data.

**Trend estimation**

25. Smoothed seasonally adjusted series produce a measure of trend by reducing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson-weighted moving average to the respective seasonally adjusted series. These trend series are used to analyse the underlying behaviour of the series over time.

26. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller and after 3 months have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors.

**Month-to-month movements**

27. Care should be taken in the interpretation of month-to-month movements in labour force survey estimates as they are subject to sampling and non-sampling variability as explained in paragraph 16.

29. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products* (1101.0). The ABS also issues the *Release Advice* (1105.0) on Tuesdays and Fridays which lists publications to be released in the next few days. Both the *Catalogue* and the *Release Advice* are available from any ABS office.

**Unpublished statistics**

30. As well as the statistics included in this and related publications, the ABS may have other relevant unpublished data available. Inquiries should be made to the contact shown at the front of this publication.

**Symbols and other usages**

- .. not applicable
- \* subject to sampling variability too high for most practical purposes; See paragraphs 8 and 9 in the Technical Notes

31. Where figures have been rounded, discrepancies may occur between totals and the sums of the component items.

## TECHNICAL NOTES

### Estimation procedure

The labour force estimates are derived from the monthly population survey by use of a complex ratio estimation procedure, which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself. This procedure compensates for under-enumeration in the survey and leads to more reliable estimates.

2. Since regular estimates of the population are not available at the regional level, the State benchmarks were used to produce regional estimates. This methodology assumes a common pattern of under-enumeration at the regional level and also ensures that regional estimates add to the State totals.

### Data quality

3. Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error. *Non-sampling error* is explained in the Explanatory Notes, paragraph 16 (b). The *sampling error* is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed.

#### Standard error of estimates

4. One measure of the variability of estimates which occurs as a result of surveying only a sample of the population is the *standard error* (SE).

5. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included and about 19 chances in 20 that the difference will be less than two standard errors.

6. The standard error of an estimate can be obtained from Table A. Linear interpolation should be used to calculate the standard error of estimates falling between the sizes of estimates listed in the table (see example following Table A).

7. Standard errors for some estimates, e.g. unemployment, can vary from those shown in the tables.

Methods for calculating the standard errors of these estimates are shown in the table below.

#### Relative standard error

8. Another measure of sampling variability is the *relative standard error* (RSE). This is obtained by expressing the standard error as a percentage of the estimate to which it refers. The relative standard error is a useful measure in that it provides an immediate indication of the percentage errors likely to have occurred due to sampling and thus avoids the need to refer also to the size of the estimate.

9. In the tables in this publication, only estimates with relative standard errors of 25% or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. \* 3.0) to indicate they are subject to high standard errors and should be used with caution. Small estimates are subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable use.

#### Standard error of movement

10. The movement in the level of an estimate is also subject to sampling variability. The standard error of the movement depends on the levels of the estimates from which the movement is obtained rather than the size of the movement. Standard errors of monthly movements are given in Table B. These estimates apply only to estimates of movements between two consecutive months.

11. Movements between corresponding months of consecutive quarters, i.e. *quarterly movements*, can be obtained by multiplying the figure in Table B by 1.21. Standard errors of movements between corresponding months of consecutive years, i.e. *annual movements*, can be obtained by multiplying the figures in Table A by 1.3. When using Tables A or B to calculate standard errors of movements, refer to the larger of the two estimates from which the movement is derived.

### METHODS FOR CALCULATING THE STANDARD ERRORS FOR SELECTED ESTIMATES

Measure of reliability to be determined	Method
Standard errors of estimates of employed persons.	Determine the SE from Table A directly.
Standard errors of estimates of unemployed persons.	Multiply the SE from Table A by 0.97.
Standard errors of estimates of persons not in the labour force.	Multiply the SE from Table A by 1.06.
Standard errors of rates (e.g. the unemployment rate which is based on the number of unemployed persons expressed as a percentage of the number of persons in the labour force).	Determine the RSE of the numerator (x) and the denominator (y) then apply the following formula.
	$RSE(x/y) = \sqrt{[RSE(x)]^2 + [RSE(y)]^2}$
Standard error of average hours worked.	Determine the RSE for the number of persons on which the average is based and multiply this by 0.7.
Standard error of median duration of unemployment.	Determine the RSE for the number of persons on which the median is based and multiply this by 2.0.
Standard error of monthly movements.	Using Table B, look up the SE of the larger estimate.
Standard error of quarterly movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.21.
Standard error of annual movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.3.

## TECHNICAL NOTES — continued

## Linear interpolation

12. Linear interpolation is used to determine the standard error of an estimate which falls between two values listed in the *size of estimate* column in Tables A or B. Linear interpolation is best described using an example. In August 1995 there were 642,800 ( $X_e$ ) employed females in Queensland. This estimate falls between the values 500,000 ( $X_l$ ) and 1,000,000 ( $X_u$ ) in Table A.

13. The standard error of the estimate is determined as follows:

$$\begin{aligned} \text{Firstly calculate } F &= \frac{X_e - X_l}{X_u - X_l} \\ &= \frac{642,800 - 500,000}{1,000,000 - 500,000} \\ &= 0.286 \end{aligned}$$

Secondly, calculate the standard error of the estimate,  $SE(X_e)$  thus,

$$\begin{aligned} SE(X_e) &= SE(X_l) + F[SE(X_u) - SE(X_l)] \\ &= 7,000 + 0.286 \times [8,900 - 7,000] \\ &= 7,543 \\ &= 7,500 \text{ rounding to the nearest 100.} \end{aligned}$$

Therefore the standard error of the number of employed females in Queensland in August 1995 (642,800) is 7,500.

## GLOSSARY

*Attending school.* Persons aged 15 to 19 years who, during the reference week, were enrolled full-time at secondary or high schools.

*Attending tertiary educational institution full-time.* Persons aged 15 to 24 years who, during the reference week, were enrolled full-time at a TAFE college, university or other educational institution.

*Average hours worked.* Aggregate hours worked by a group divided by the number of persons in that group.

*Average duration of unemployment.* For a group of unemployed persons, the aggregate duration of unemployment divided by the number of persons in the group.

*Duration of unemployment.* The period from the time a person began looking for work or was stood down, to the end of the reference week. Thus the survey measures current (and continuing) periods of unemployment rather than completed spells. For persons who may have begun looking for work while still employed, the duration of unemployment is defined as the period from the time the person last worked full-time for 2 weeks or more to the end of the reference week.

*Employed.* Persons aged 15 years and over who, during the reference week:

- (a) worked for 1 hour or more for pay, profit, commission or payment in kind in a job or business or on a farm (comprising employees, employers and own account workers);
- (b) worked for 1 hour or more without pay in a family business or on a farm (i.e. contributing family workers);
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than 4 weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than 4 weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; receiving wages or salary while undertaking full-time study or
- (d) were employers, own account workers or contributing family workers who had a job, business or farm, but were not at work.

*Former workers.* Unemployed persons who have previously worked full-time for 2 weeks or more but not in the past 2 years.

*Full-time workers.* Employed persons who usually worked 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

*Hours worked.* The total number of hours a group of employed persons has actually worked during the reference week, not necessarily hours paid for.

*Job leavers.* Unemployed persons who have worked full-time for 2 weeks or more in the past 2 years and left that

*job voluntarily*, that is, because of unsatisfactory work arrangements, pay or hours; the job was seasonal, temporary or a holiday job and they left that job to return to studies; their last job was running their own business and they closed down or sold that business for reasons other than financial difficulties or any other reasons.

*Job losers.* Unemployed persons who have worked full-time for 2 weeks or more in the past 2 years and left that job involuntarily, that is, were laid off or retrenched from that job; left that job because of their own ill-health or injury; the job was seasonal or temporary and they did not leave that job to return to studies or their last job was running their own business and the business closed down because of financial difficulties.

*Industry.* From August 1994, Labour Force Survey industry data are classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC). Like the previous Australian Standard Industrial Classification (ASIC), ANZSIC classifies businesses according to their economic activities, in a structure consisting of four levels (Division, Sub-division, Group and Class). Labour Force Survey data are coded at the group level, as was the practice under ASIC. To assist users in making comparisons with previously published data, a concordance had been developed which shows for each ASIC Group, the corresponding ANZSIC Group or Groups. The concordance also shows the estimated employment attributable to each ANZSIC Group, compared with ASIC Group data, according to establishment unit employment data on the ABS Business Register at May 1994. Historical estimates of employment by ANZSIC Group have been compiled on the basis of the concordance, and are available on request. For further information about the application of ANZSIC, see *Information Paper: Labour Force Survey: Introduction of ANZSIC for Industry Data* (6259.0) and *Australian and New Zealand Standard Industry Classification 1993* (1292.0).

*Labour force.* For any group, persons who were employed or unemployed, as defined.

*Labour force status.* A classification of the civilian population aged 15 years and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.

*Marital status.* Persons are classified as married (husband and wife) if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey. The not married category comprises persons who have never married, or are separated, widowed or divorced, as well as those who, although reported as being married, did not have a spouse who usually lived in the household.

*Median duration of unemployment.* The duration which divides unemployed persons into two equal groups, one comprising persons whose duration of unemployment is above the median and the other, persons whose duration is below it.

*Not in the labour force.* Persons who were not in the categories employed or unemployed, as defined. They include persons who were keeping house (unpaid), retired, voluntarily inactive, permanently unable to work, persons

## GLOSSARY – continued

in institutions (hospitals, jails, sanatoriums, etc.), trainee teachers, members of contemplative religious orders and persons whose only activity during the reference week was jury service or unpaid voluntary work for a charitable organisation.

**Occupation.** Classified according to the *Australian Standard Classification of Occupations, 1986* (1222.0).

**Participation rate.** For any group, the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group. Participation rates for persons classified by birthplace are calculated using population estimates which exclude those in institutions. Participation rates for persons classified by school or tertiary educational institution attendance are calculated using population estimates which include those in institutions.

**Part-time workers.** Employed persons who usually worked less than 35 hours a week and who did so during the reference week.

**Seasonally adjusted series.** A time series of estimates with the estimated effects of normal seasonal variation removed. See paragraph 24 of the Explanatory Notes for more detail.

**Statistical regions.** Classified according to the *Australian Standard Geographical Classification, Edition 2.3* (1216.0).

**Status in employment.** From August 1994, the labour force survey has adopted the international classification of Status in Employment, previously referred to as Status of Worker in the survey. This change follows recommendations of the 15th International Conference of Labour Statisticians and ABS standards. For the labour force survey, the change involves no changes in definitions. The only changes are to the classification titles, as follows:

<b>Status of Worker</b>	<b>Status in Employment</b>
Wage and salary earner	Employee
Employer	Employer
Self-employed	Own account worker
Unpaid family helper	Contributing family worker

**Trend series.** A smoothed seasonally adjusted series of estimates. See paragraphs 25 and 26 of the Explanatory Notes for more detail.

**Unemployed.** Persons aged 15 years and over who were not employed during the reference week and:

- (a) had actively looked for full-time or part-time work at any time in the 4 weeks up to the end of the reference week and:
  - (i) were available for work in the reference week or would have been available except for temporary illness (i.e. lasting for less than 4 weeks to the end of the reference week);
  - (ii) were waiting to start a new job within 4 weeks from the end of the reference week and would have started in the reference week if the job had been available then
- or
- (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than 4 weeks up to the end of the reference week (including the whole of the reference week) for reasons others than bad weather or plant breakdown.

**Unemployed persons classified by industry and occupation.** Unemployed persons who had worked full-time for 2 weeks or more in the last 2 years are classified according to the industry and occupation of their most recent full-time job.

**Unemployed looking for full-time work.** Unemployed persons who actively looked for full-time work or were to resume a full-time job, from which they had been stood down.

**Unemployed looking for part-time work.** Unemployed persons who had actively looked for part-time work only or were to resume a part-time job, from which they had been stood down.

**Unemployment rate.** For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.
